

Yaw-Kuen Li (李耀坤)

Department of Applied Chemistry, National Chiao Tung University

1001 Ta-Hseh Rd. Hsinchu, Taiwan

(O) 03-5731985 Fax 03-5723764

E-mail: ykl@faculty.nctu.edu.tw

Education

- 1987 - 1991 PhD, Department of Chemistry, Tulane University, USA
1985 - 1987 MS, Department of Chemistry, National Cheng Kung University, Taiwan
1977 - 1981 BS, Department of Chemistry, National Tsing Hua University, Taiwan

Experience

- 2014- Dean, College of Science, NCTU
2014-2014 Visiting scholar, NMI, University of Tubingen, Germany
2011-2013 Director of Chemistry division, National Science Council, Taiwan
2007-2007 Visiting scholar, Linkoping University, Sweden
2007-2007 Dean of Student Affair, NCTU
2004-2005 Panel of Biochemistry Division, National Science Council, Taiwan
2005-2005 Panel of Biochemistry Division, National Science Council, Taiwan
2004 -2006 Chair, Department of Applied Chemistry, NCTU
2002 -present Professor, Department of Applied Chemistry, NCTU
2001-2001 Visiting scholar, University of British Columbia, Canada
1993-2001 Associate professor, Department of Applied Chemistry, NCTU
1991 -1993 Post-doctoral Fellow, Pharmacology and Molecular Science Department,
School of Medicine, Johns Hopkins University, USA

Research Field

Protein Engineering, Enzymology, Bio-analysis, Bio-sensing, Bio-conjugation

Research Interests

We are “Cross-disciplinary Enzyme Research Lab” of the Applied Chemistry Department, NCTU. Our primary research interests include the following three major parts:

(a) **Enzyme-based Catalytic Biological Reactions:** We have developed all-around biological techniques and tools to synthesize various oligosaccharides and glucoside compounds which can be useful in many biomedical applications. Besides, we invented an “one-pot” protein purification process, including our unique controllable peptide cleavage technology (US Patent issued), which allows us to efficiently purify copious amount of proteins without running chromatography.

(b) Bio-sensors: In the past ten years, our lab has led an interdisciplinary bio-sensor R&D team crossing different departments of NCTU, and achieved several major technical milestones toward our ultimate goal of commercialization, including chip surface modification by molecule-level self-assembly, protein/antibody immobilization and biological signal read-out electrically or opto-electronically.

(c) Solid-state / Biological Interface Chemistry: Recently, we have been intensively focused on the design and synthesis of versatile chemical linkers which can interface between the solid-state nanoparticles (e.g. Si QDs, Au NPs) or substrate (e.g. QCM chip) and the biological system. Moreover, the chemical linkers sometimes can function as a anti-non-specific binding coating.

Recent publication

1. Hui-Jen Lin, Zhen-Yi Hong, Yaw-Kuen Li*, and Ian Liao* (2016, Jul). Fluorescent tracer of dopamine enables selective labelling and interrogation of dopaminergic amacrine cells in the retina of living zebrafish. *RSC Advances*, 6, 71589-71595.
